Weak Prompt vs Strong Prompt

Extract the text for strong and weak prompts, PFA imagenio

Sure, I extracted the **Weak** and **Strong** prompt text from the attached image.

1. Selenium Test Script

✗ Weak Prompt

"Generate a Selenium test script."

✓ Strong Prompt

"You are a test automation assistant. Generate a Selenium Java script to verify login on a Salesforce app. Include setup/teardown, explicit waits."

+ Ask anything

Think

Upgrade

Share

2. Bug Report

✗ Weak Prompt

"Write a bug report."

✓ Strong Prompt

"You are a QA engineer. Write a bug report for a checkout crash on Chrome after clicking 'Place Order' with an empty cart — severity, repro steps, expected vs actual."

3. API Test Cases

✗ Weak Prompt

"Generate API tests."

✓ Strong Prompt

"You are an API test automation assistant. Generate REST Assured tests in Java for POST /login — valid, invalid password, locked account — with expected status codes."

+ Ask anything

Extract the text for strong and week prompts, PFA imageno

Here is the extracted text for the **weak** and **strong** prompts from the image, grouped by task:

1. Selenium Test Script

- **Weak Prompt:** "Generate a Selenium test script."
- **Strong Prompt:** "You are a test automation assistant. Generate a Selenium Java script to verify login on a Salesforce app . Include setup/teardown, explicit waits."

2. Bug Report

- **Weak Prompt:** "Write a bug report."

← → ↻ 🔍 google.com/search?q=Extract+the+text+for+strong+and+week+prompts%2C+PFA+imageno&sca_esv=6a275

 AI Mode All Visual matches

 

2. Bug Report

- **Weak Prompt:** "Write a bug report."
- **Strong Prompt:** "You are a QA engineer. Write a bug report for a checkout crash on Chrome after clicking 'Place Order' with an empty cart – severity, repro steps, expected vs actual."

3. API Test Cases

- **Weak Prompt:** "Generate API tests."
- **Strong Prompt:** "You are an API test automation assistant. Generate REST Assured tests in Java for POST /login – valid, invalid password, locked account – with expected status codes."

Would you like me to help you **write a custom strong prompt** for another specific QA or development task?

QA Bug Dashboard

Instructions:

- Generate a Bug Reporting Dashboard as a single self-contained HTML file
- [STRICT] No external dependencies — all CSS/JS inline
- [MANDATORY] Totals: open/closed, severity (P0-P3), bugs by module & assignee
- [CRITICAL] One chart (bar/pie) for severity distribution
- [MANDATORY] Sortable/filterable bug table (ID, Title, Severity, Status, Assignee, Module)
- Responsive layout for desktop and tablet

Context:
QA team tracks bugs across multiple projects and sprints in a spreadsheet today; needs a single-page visual dashboard to

Instant, Expert, and Vision—now unified and upgraded
A new model for everyday chat, image understanding, and complex problem-solving

Regression Prioritization — Top 10 Highest-Risk Tests

Assumptions: No test case list was attached, so a representative set of 50 regression tests across 6 modules has been evaluated. Risk score = (Module Criticality × 0.4) + (Defect History × 0.35) + (Business Impact × 0.25), normalized to 100.

Rank	Test Case ID	Module	Risk Score	Justification
1	TC-CHK-018	Checkout	96	Payment module — 7 defects in last 3 sprints (2 P0). Blocks revenue.
2	TC-AUTH-042	Auth	94	Login/session handling — 5 defects, all P1. Gatekeeper for entire app.
3	TC-CHK-024	Checkout	91	Order confirmation flow — 3 recent P1 defects; directly affects order integrity.

Regression Prioritization — Top 10 Highest-Risk Tests

Source: Regression-Prioritization-Testcases.txt (50 test cases) - Method: Risk = (Module Criticality × 0.4) + (Recent Defects × 0.35) + (Business Impact × 0.25)

Rank	TC ID	Module	Description	Risk Score	Justification
1	TC-022	Payment	Payment gateway timeout handling	96	Highest defect count (3). Payment path — direct revenue impact. Timeout mishandling risks double-charge or lost orders.
2	TC-020	Payment	Payment via credit card success	94	2 recent defects on the highest-revenue path. Any failure blocks all purchases.
3	TC-023	Payment	Refund processed after order cancellation	91	2 defects. Financial and compliance exposure; refund errors drive chargebacks and support load.
4	TC-016	Checkout	Apply valid discount code	88	2 defects. Checkout is the conversion funnel; broken discounts cause abandonment and revenue leakage.
5	TC-033	Search	Search with filters (category, price)	85	2 defects. Search drives product discovery — degraded filters reduce conversions across all categories.
6	TC-021	Payment	Payment via credit card declined	82	1 defect. Declined-payment handling must be reliable to avoid false declines and support tickets.
7	TC-024	Payment	Partial refund for partial return	79	1 defect. Financial integrity — incorrect partial refunds create reconciliation issues.
8	TC-019	Checkout	Apply expired discount code charge error	76	1 defect. Validation gap could allow unintended discounts, compliance and margin risk.
